Innovative closed circuit Bins system for the purification of molluscs. It can be developed in height for over 3 rows of Bins, thanks to the water loading-draining system which is independent for each single Bin.

Ventilation system that can oxygenate the water in a strong, homogeneous and noiseless way, KEEPING THE MOLLUSCS ALIVE AND VITAL.

The surface suspension and the subsequent elimination of micro impurities, albumins and foams are other important results that can be achieved through the skimmer's action

Filtering system with active calcareous sand, which is developed in modular Bins. On request: filtering system with cylinders.

Cleaning and maintenance can be carried out isolating each single Bin, without the need of switching off the whole plant.

The great flexibility of the modular production allows to increase the number of Bins at very reasonable prices

THE SYSTEM CAN ALWAYS BE USED TOTALLY OR PARTIALLY, ACCORDING TO THE NEEDS.

- Power: 380 V.
- Cooling unit with ecological gas compressor
- Titanium evaporator
- Control board of the technical equipment with digital display thermostat
- PVC hydraulic plant
- Corrosion-resistant centrifugal pump.
- UV-rays sterilisation plant with Teflon pipes.
- Ozone plant for the elimination of germs (optional).
- Protein skimmer
- Electrical system with fireproof cables in accordance with the law.
- Active coal filter
- Pre-filtering system
- Seaweed biological filter (with Lithothamnium calcareum seaweed) with modular bins or filtering cylinders.
- Tank for water storing (cost to be charged to customer).
